R1160 Product Sheet

Introducing Plug & Play Performance

- R1160 - Effortless plug and play deployment.

An ultra-compact, space-saving pod offering true plug-and-play deployment via a standard power socket. Featuring 13,680 precision LEDs delivering 30 mW/cm² of full-spectrum light, it is engineered for seamless integration into boutique treatment rooms, express spa suites, and luxury residential spaces. Available in high-gloss black or brushed silver.

Delivery & Installation

White-Glove Delivery, Installation & Site Readiness

Every Renovio system is delivered and assembled via our specialist, third-party white-glove service. Our dedicated technical team handles complete physical deployment on-site—including precise positioning, split-chassis assembly, and physical setup.

- **Electrical Connection:** For models operating on a standard 13A UK 3-pin plug (such as the R1160), our team will plug in and commission the unit directly once in position. For high-power systems requiring a dedicated power supply, both the pre-installation of the local isolator switch and the final hardwired electrical connection to the positioned unit must be completed by a client certified electrical engineer.
- **Waste Clearance:** Once your bed is fully assembled, physically positioned, and ready for your electrician's final connection, all packaging and installation waste is completely cleared and removed from your premises—leaving your facility immaculate.
